Guide

Simulated inspection records. Revision B1. Review copy of the saved editable workbook.

Field	Instruction
Status	Simulated inspection records. Approved development input. Revision B1.
Use	Edit the tables in this workbook. The PDF is a review copy.
Identity	Keep record IDs stable. Equipment IDs refer to assessment inventory additions, not IFC objects.
Shared records	Shared applies to all three information configurations. Do not duplicate equipment observations.
S1	Baseline boundary assessment with mixed information.
S2	Selected boundary documentary information unavailable. Observed evidence retained.
S3	Additional simulated evidence and declared assessor judgements. No real chronology is claimed.
Dates	Assessed date is 2025-03-17. Actual inspection time is unknown. Planned times are separate.
Evidence	All evidence descriptions are simulated. No supporting physical files are supplied.
Missing values	Blank means unknown or not supplied. No is an explicit negative observation.
Assessment	Satisfactory, Defect observed and Unable to determine are supplied boundary judgements.
Function	Passed and Failed describe a supplied functional-test observation, not overall compliance.
Availability and adequacy	Available does not imply sufficient. Adequacy is a separate assessor judgement.
Reported cause	Leave blank unless supplied and supported. Damage is not its cause.
Scope	Selected rows define the required records. An absent record is not a pass.
Evidence links	Use one ObservationEvidence row for each distinct relationship.
